

## Take the wheel

Contributed by REM

Rex-Cut Products Inc. says it offers a line of cut-off wheels that feature a thin profile to cut stainless steel cooler and faster than standard resinoid wheels and produce a smaller exit bur. Featuring a proprietary reinforced resinoid bonding system of 60 grit aluminum oxide abrasives, Rex-Cut Alpha-Green Cut-Off Wheels come in Type 1 straight-sided and Type 27 depressed centre styles in a variety of diameter sizes. For cutting aluminum, a 46 grit 0.045-inch profile version is also available.
